EDUCATION

University of British Columbia **Vancouver, BC**

Bachelor of Science in Computer Science and Physics *Graduation Date: May 2026*

Relevant Courses: Software Engineering, Applied Machine Learning, Relational Databases, Computer Networking

WORK EXPERIENCE

Wealth Management Firm **Remote**

Software Developer (Freelance) *July 2026 – Present*

- Replaced spreadsheet-based client workflows with 6 React and Express.js workflows for onboarding, investments, transfers, and client management, working directly with business users to address repeated manual work.
- Built and tested 4 internal tools for onboarding, transactions, validated data imports, and reporting using React, Express.js, MySQL, and REST APIs, connecting user-facing workflows to backend services.
- Protected sensitive financial data across 50–100 client records through relational constraints, input validation, duplicate prevention, and auditable change history, preserving data correctness and traceability.
- Interviewed stakeholders and observed their workflows to clarify ambiguous needs, translating findings into architecture, relational schemas, API specifications, process diagrams, and scoped implementation tasks.

TAK Softwares **Calgary, AB**

Software Developer (Contract) *March 2026 – July 2026*

- Developed 5+ application and internal-tool workflows using JavaScript, React, Node.js, Express.js, and MySQL, turning business requirements into document handling, reports, and role-based dashboards.
- Built Python ingestion pipelines and REST API integrations to import, validate, transform, and store vendor and grant data in MySQL, preparing external records for searchable applications and reporting.
- Collaborated in a 4–5-person Agile team to plan delivery, review code, investigate defects, and resolve blockers, coordinating tested production changes while working across frontend and backend components.

Lux Bio **Vancouver, BC**

Software Developer (Internship) *June 2023 – Aug 2024*

Production Automation Platform: Owned design, testing, deployment, and support of a React, TypeScript, and Python system that tripled protocol deployment speed and doubled weekly production yield.

- Independently learned unfamiliar device protocols and built Python services and REST APIs for pumps, valves, sensors, and scales, replacing manual equipment coordination with repeatable production workflows.
- Built 3+ React and TypeScript interfaces for dashboards, configuration, device controls, and live telemetry, helping laboratory operators understand system state and manage automated production workflows.
- Reduced developer onboarding time by 50% through technical documentation, architecture walkthroughs, Git workflows, code reviews, and mentoring, sharing knowledge so teammates could contribute sooner.

Reliability & Incident Response: Built monitoring and diagnostic tools to investigate failures, trace service behavior, and support reliable operation across interconnected equipment and applications.

- Tested and updated production services through staged releases, structured logging, contextual tracebacks, real-time alerts, and incident safeguards to investigate defects and verify corrective changes.
- Recorded run state, device actions, sensor readings, errors, and operator interactions to investigate root causes, verify workflow execution, and preserve a traceable history for production troubleshooting.

Data Acquisition & Analysis: Automated laboratory analysis with Python pipelines, improving analytical accuracy by 25% and increasing data acquisition by more than 90%.

- Built Python data pipelines to process and interpret experimental datasets, investigate production trends, and support engineering decisions using measurements collected from laboratory equipment.
- Worked directly with operators and engineers to gather requirements, test releases, investigate incidents, and refine production tools, translating operational feedback into practical application improvements.

PROJECT EXPERIENCE

Agentic AI & Workflow Automation Platform **Remote**

AI Engineer *Dec 2025 – Present*

- Independently built a Python and Django REST platform using the OpenAI API and MCP, registering 60 tools for multi-step workflows across email, calendars, cloud storage, and Notion to automate routine tasks.
- Integrated 7 OAuth-backed services with idempotent retries, exponential backoff, token refresh, timeouts, rate-limit handling, and execution history to keep workflows recoverable when external APIs failed.
- Used Claude Code and Codex during implementation, testing, and review, then validated generated changes with 256 backend tests, including 31 security tests for permissions, OAuth, and input validation.

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, SQL, Java, Go

Frameworks & AI: React, Django REST Framework, Flask, Node.js, Express.js, OpenAI API, MCP, AI Agents

Data & Integrations: MySQL, PostgreSQL, REST APIs, OAuth 2.0, JWT, RBAC, Data Pipelines

Engineering: Git, Docker, Linux, GitHub Actions, CI/CD, pytest, Production Monitoring, Claude Code, Codex
